

Kaleidoscope Model of Policy Change

Applications to Food Security Policy

Dr. Danielle Resnick
Development Strategy and Governance Division
International Food Policy Research Institute

Policy Analysis Training, Nepal | 9 March 2021

Overview of Presentation

- **Motivations**
- **Details of the model with examples**
- **Suite of tools**
- **Conclusions and discussion questions**

Motivations and Aims

- **Since MDGs and Paris Declaration, growing concern with a “results-based agenda” and achieving policy impact**
- **How can we better understand where policy decisions emerge in the first place and the possibilities for reform?**
 - Requires holistic understanding of the underlying policy process
 - Involves integrating insights from separate food security spheres
- **But proliferation of variables has led some to dismiss studying policy processes**
 - Viewed as too context-specific and not rigorous enough to uncover generalizable findings

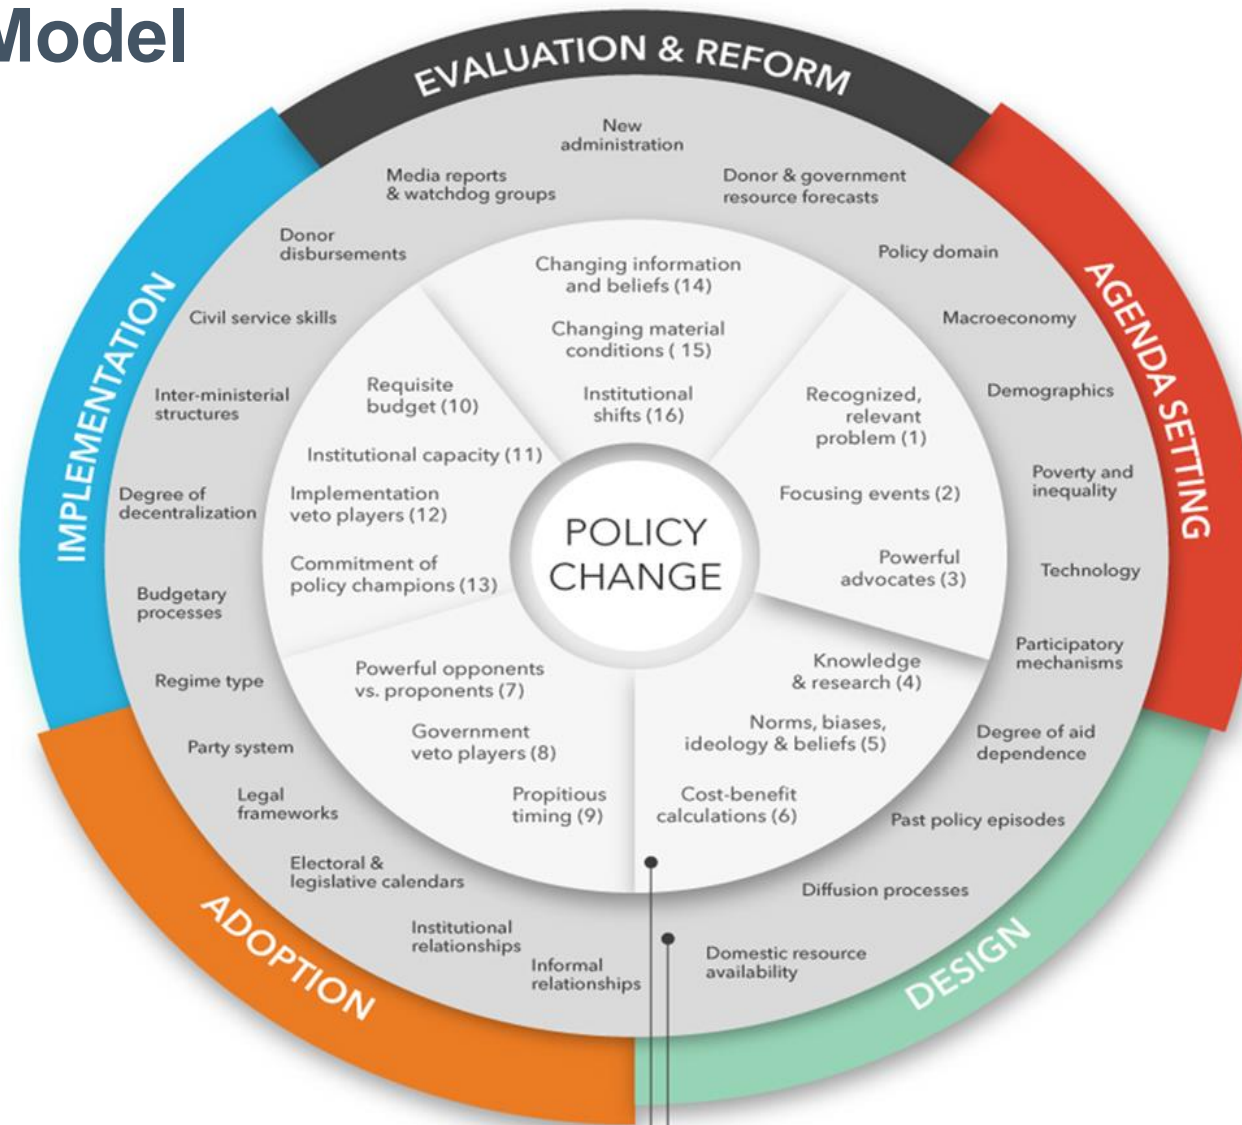

Kaleidoscope Model

Tested in:

- Ghana, Malawi, Nigeria, South Africa, Tanzania, Zambia

Applied to:

- Input subsidies, micronutrient policies, land governance

Source: Resnick, Haggblade, Babu, Hendriks, and Mather (2018)

Setting the Agenda

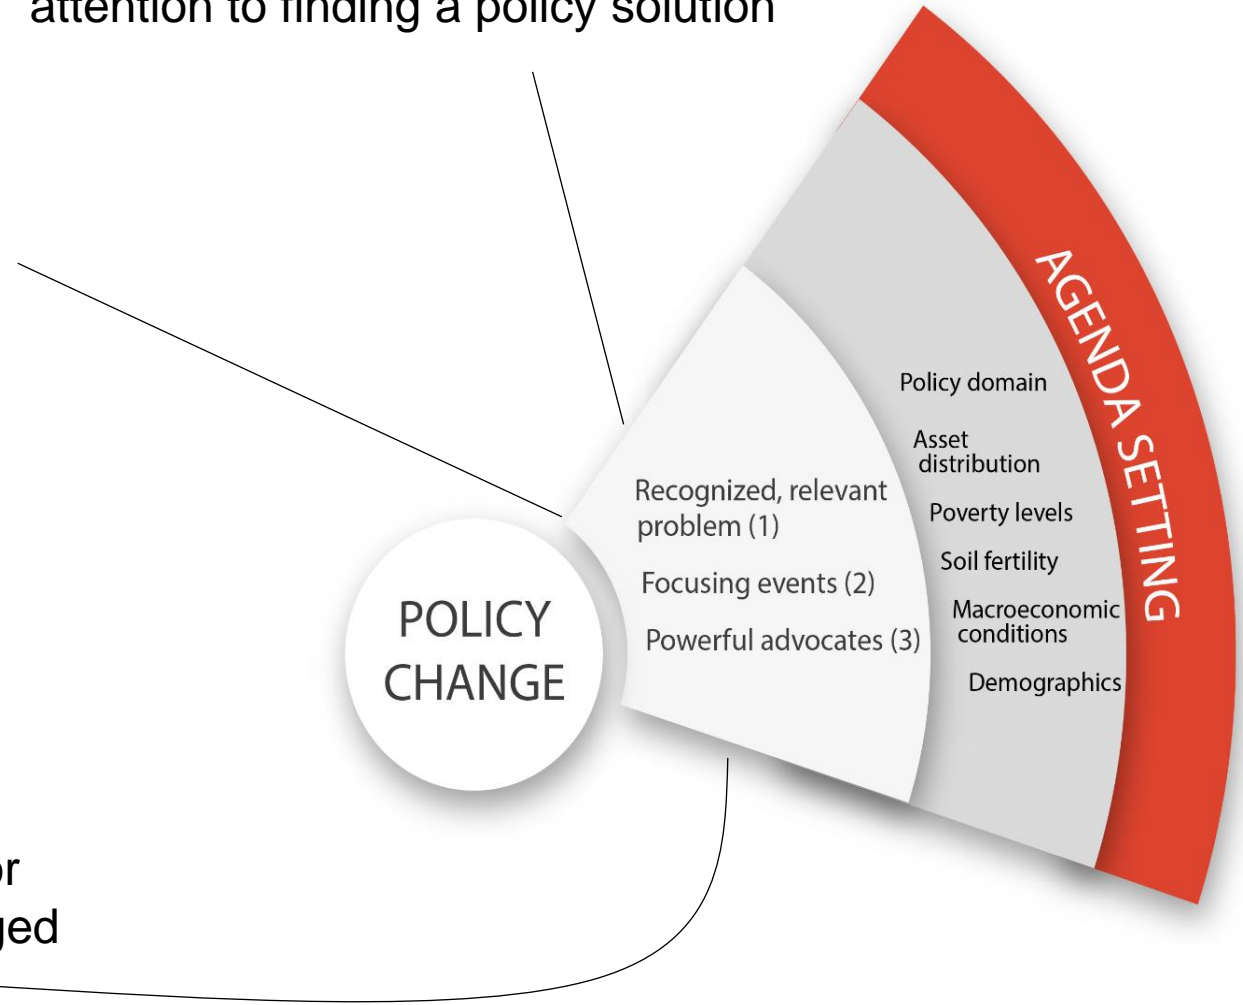

Credible evidence of a policy problem by a concerned constituency increases public attention to finding a policy solution

A well-defined event focuses public attention on a problem or creates a window of opportunity for policy change

Food Price Crisis of 2007/08 and protests shifted many ag policies

Strong individuals, organizations, or companies support a new or changed policy to key decision makers

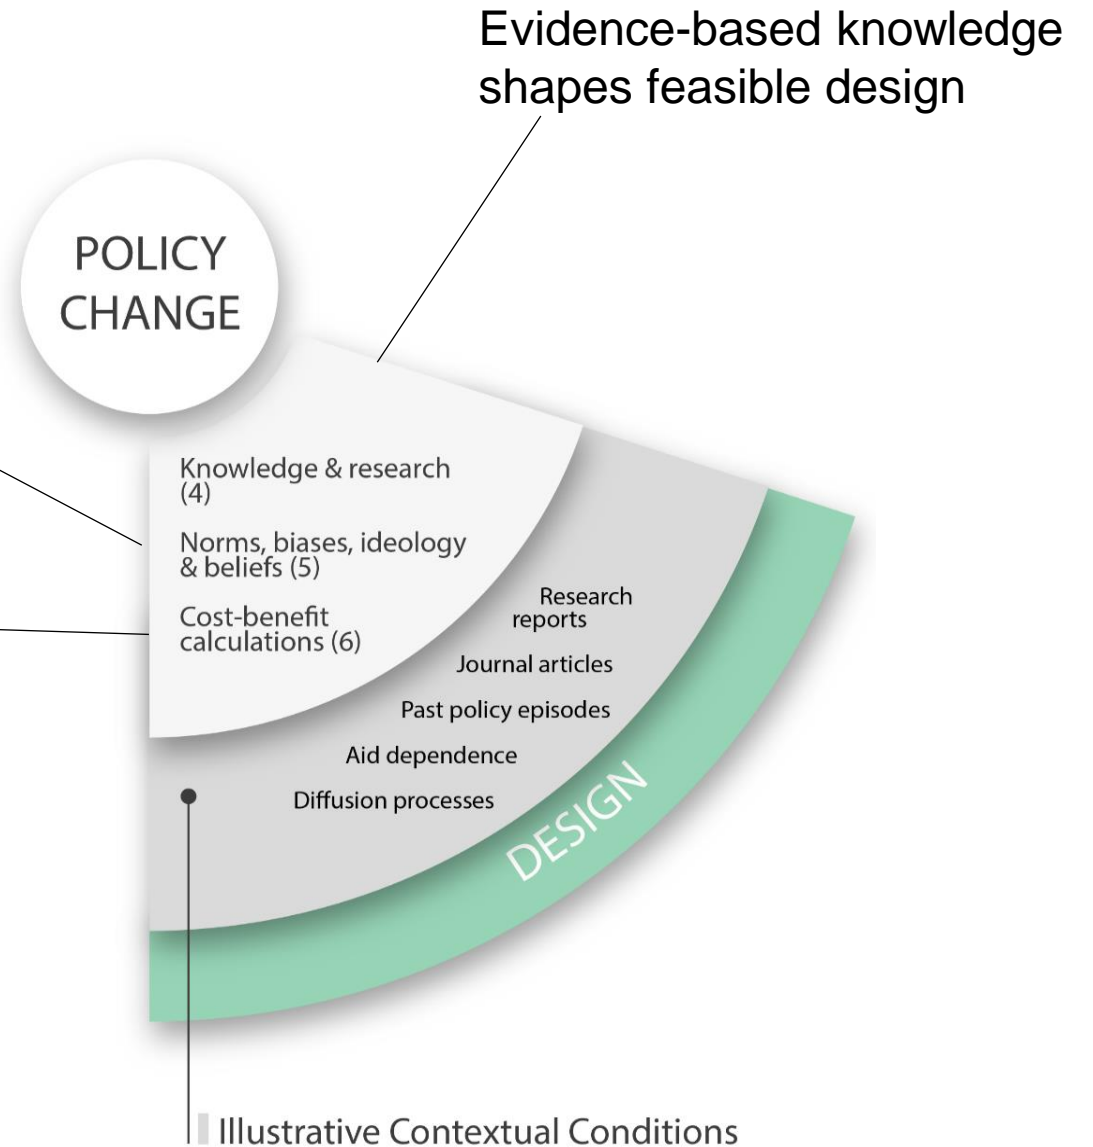

Design

Beliefs & biases shape range of acceptable design features

Expected costs & benefits (political, economic, social) determine the preferred design

Ghana's input subsidy program viewed as means of gaining votes

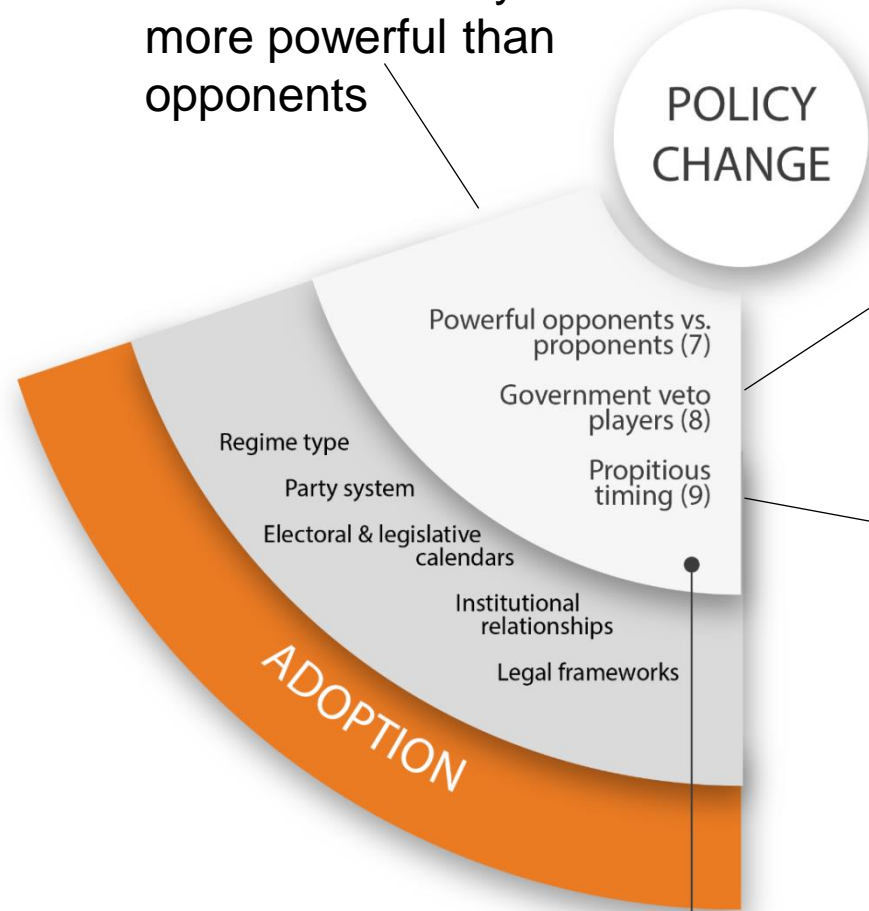

Adoption

Policy supporters must be relatively more powerful than opponents

Government agents with ultimate decision-making power must be supportive or neutral; otherwise, policy can be vetoed

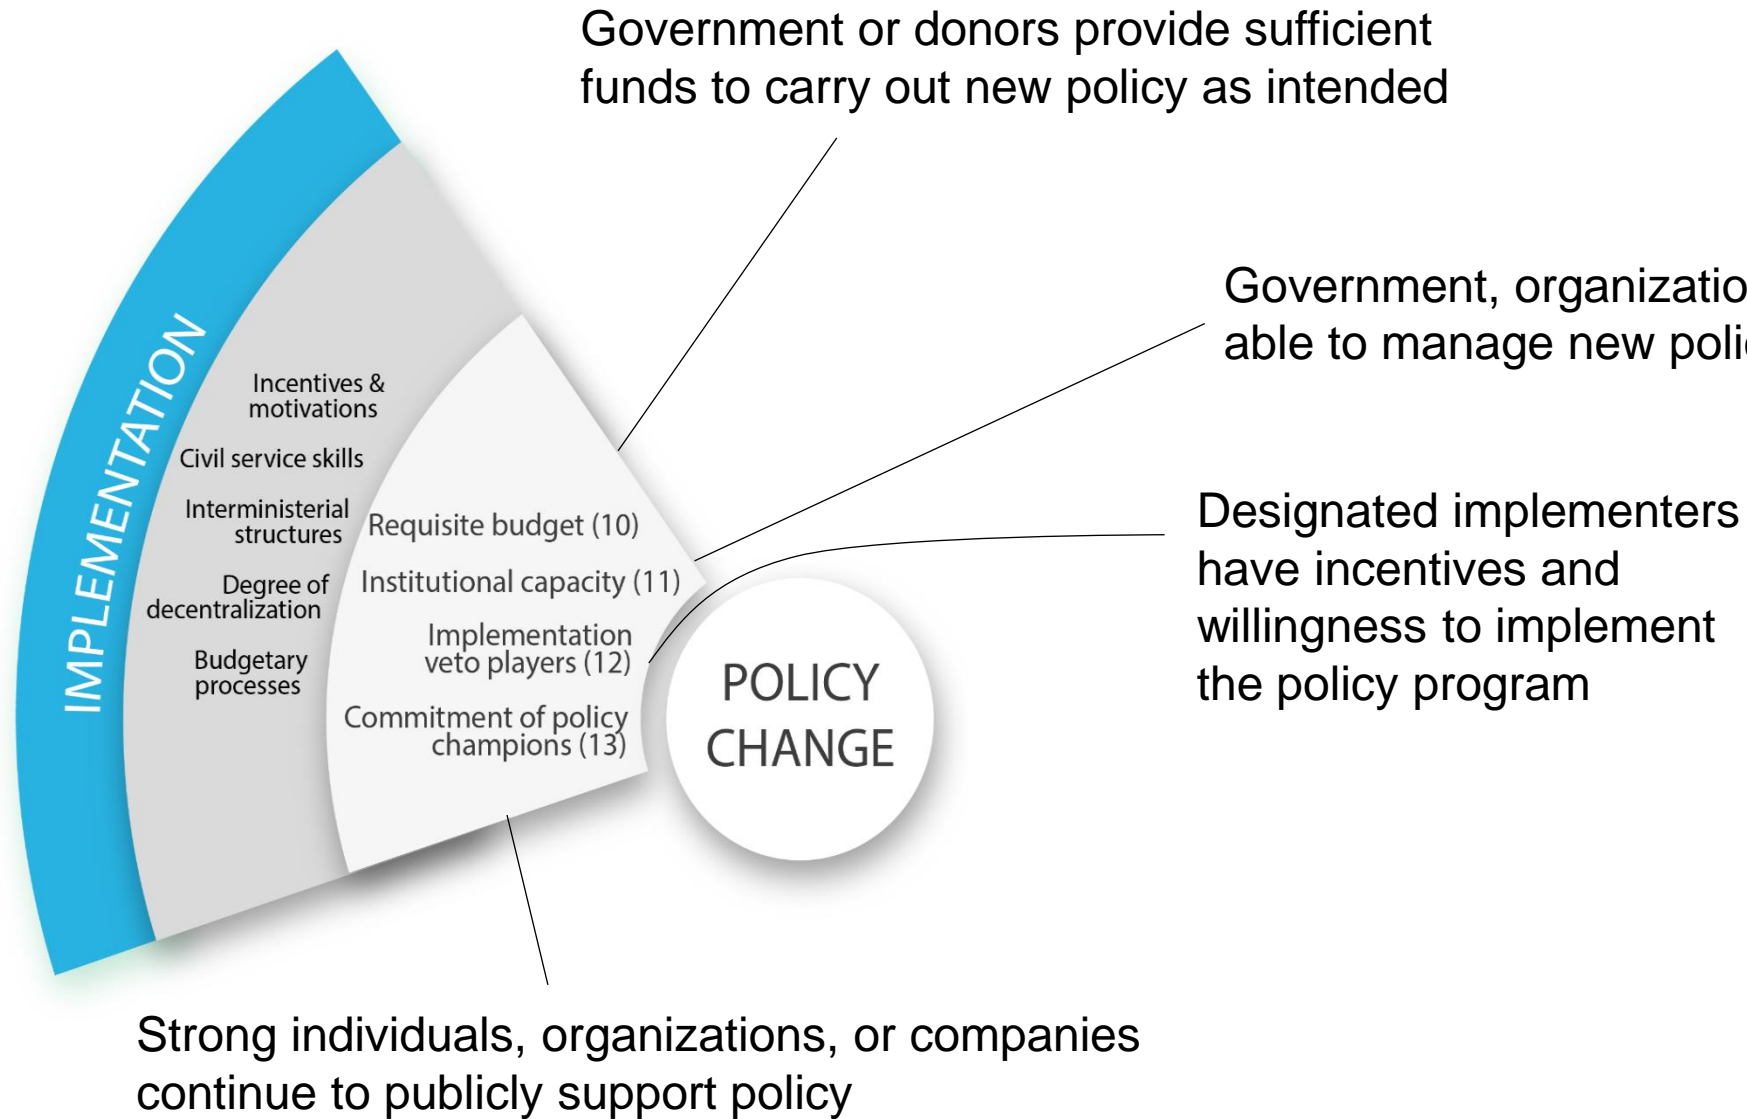

Uganda's army are key veto players in agricultural extension policy

Supporters seize opportune moments (political, economic, social) to push adoption

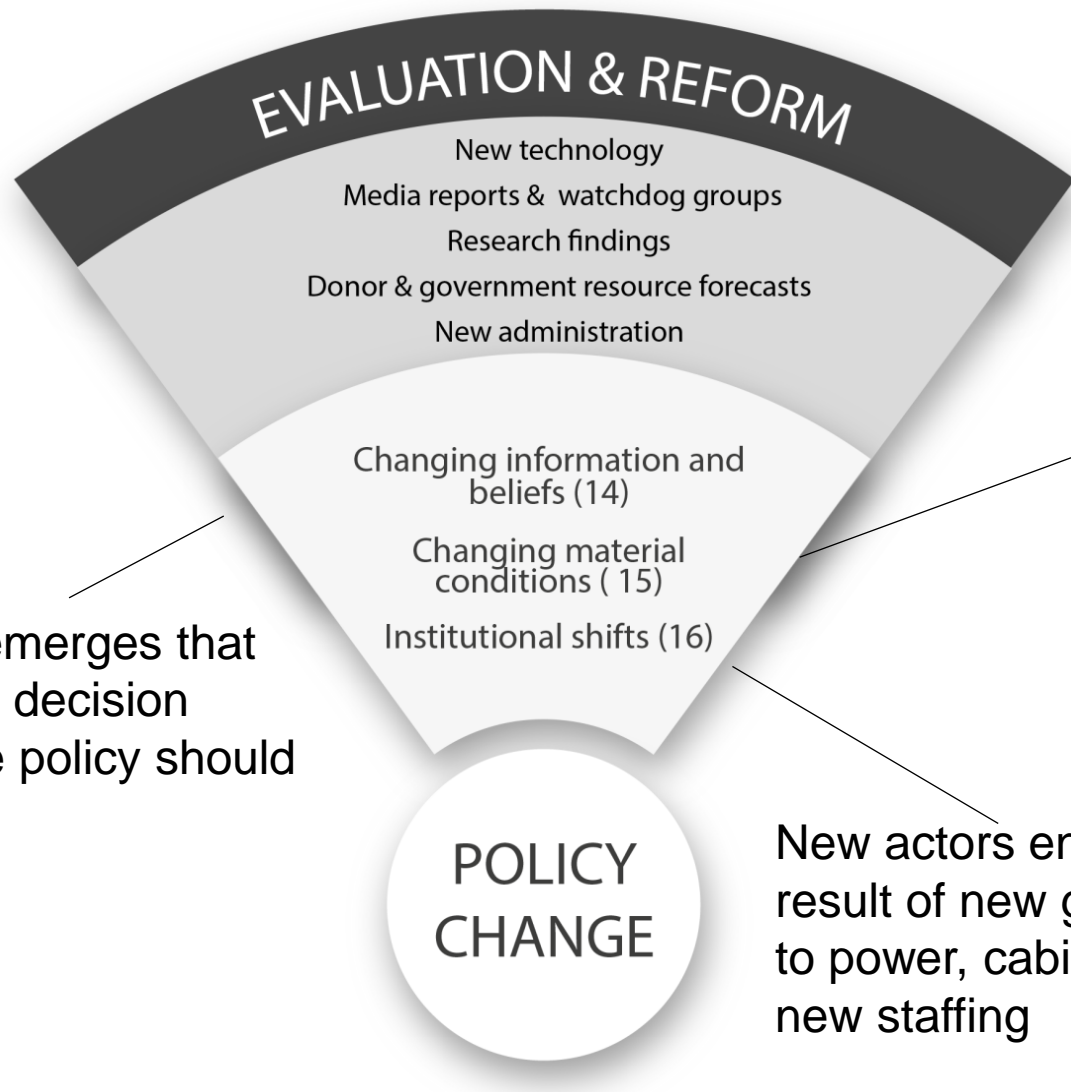

Key Determinants of Policy Change

Implementation

Zambia's electronic wallet card for input subsidy program

Evaluation & Reform

Available resources, technology, or condition change since the policy was original designed

New learning emerges that influences how decision makers believe policy should be structured

New actors enter policy arena as result of new government coming to power, cabinet reshuffle or new staffing

Turnover of governors in Kaduna, Nigeria, ends state's land titling program

Suite of Tools

Measurement table – allow for replicability in identifying presence/absence of variable

Policy chronologies – process tracing by indicating whether certain events precipitated subsequent policy changes

Policy domain mapping – roles of key actors (e.g., formulation, administration, oversight, or knowledge)

Circle of influence graphics – aligns stakeholders in a two- dimensional space to map their preferences vis-à-vis a policy with their power

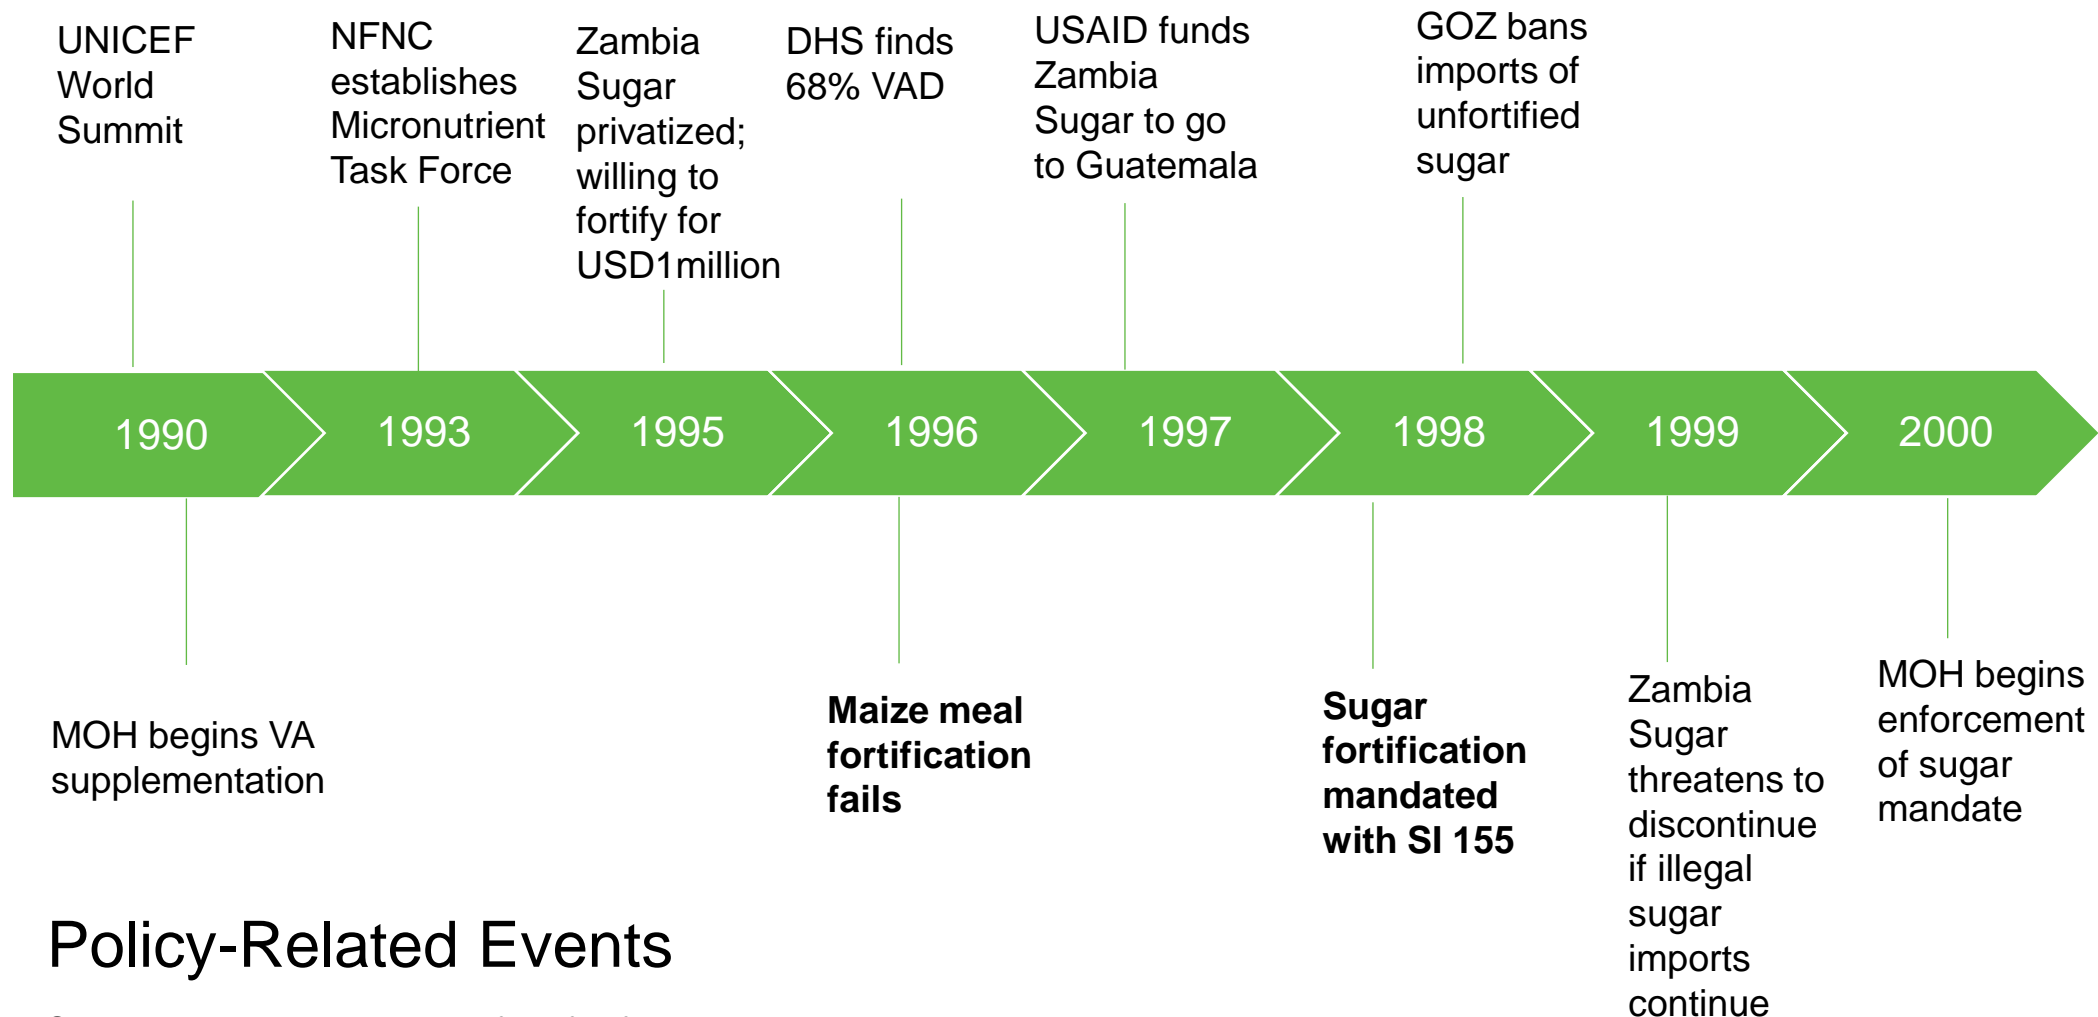

Hypothesis testing tables – codes significance of variables

Measurement Table

Policy Stages	Determinants of Policy Change	Hypothesis	Measurement
Agenda setting	1. Recognized, relevant problem	Credible evidence of a policy problem by a concerned constituency increases public attention to finding a policy solution	Identify the constituency concerned. Identify evidence used to assess the problem and measure its significance.
	2. Focusing event	A well-defined event focuses public attention on a problem or creates a window of opportunity for policy change	Identify unexpected or non-routinized events. Indicate whether and how the event attracted the attention of advocates.
	3. Powerful advocates	Strong individuals, organizations, or companies support a new or changed policy to key decision makers.	List actors lobbying for policy change.

Policy chronologies

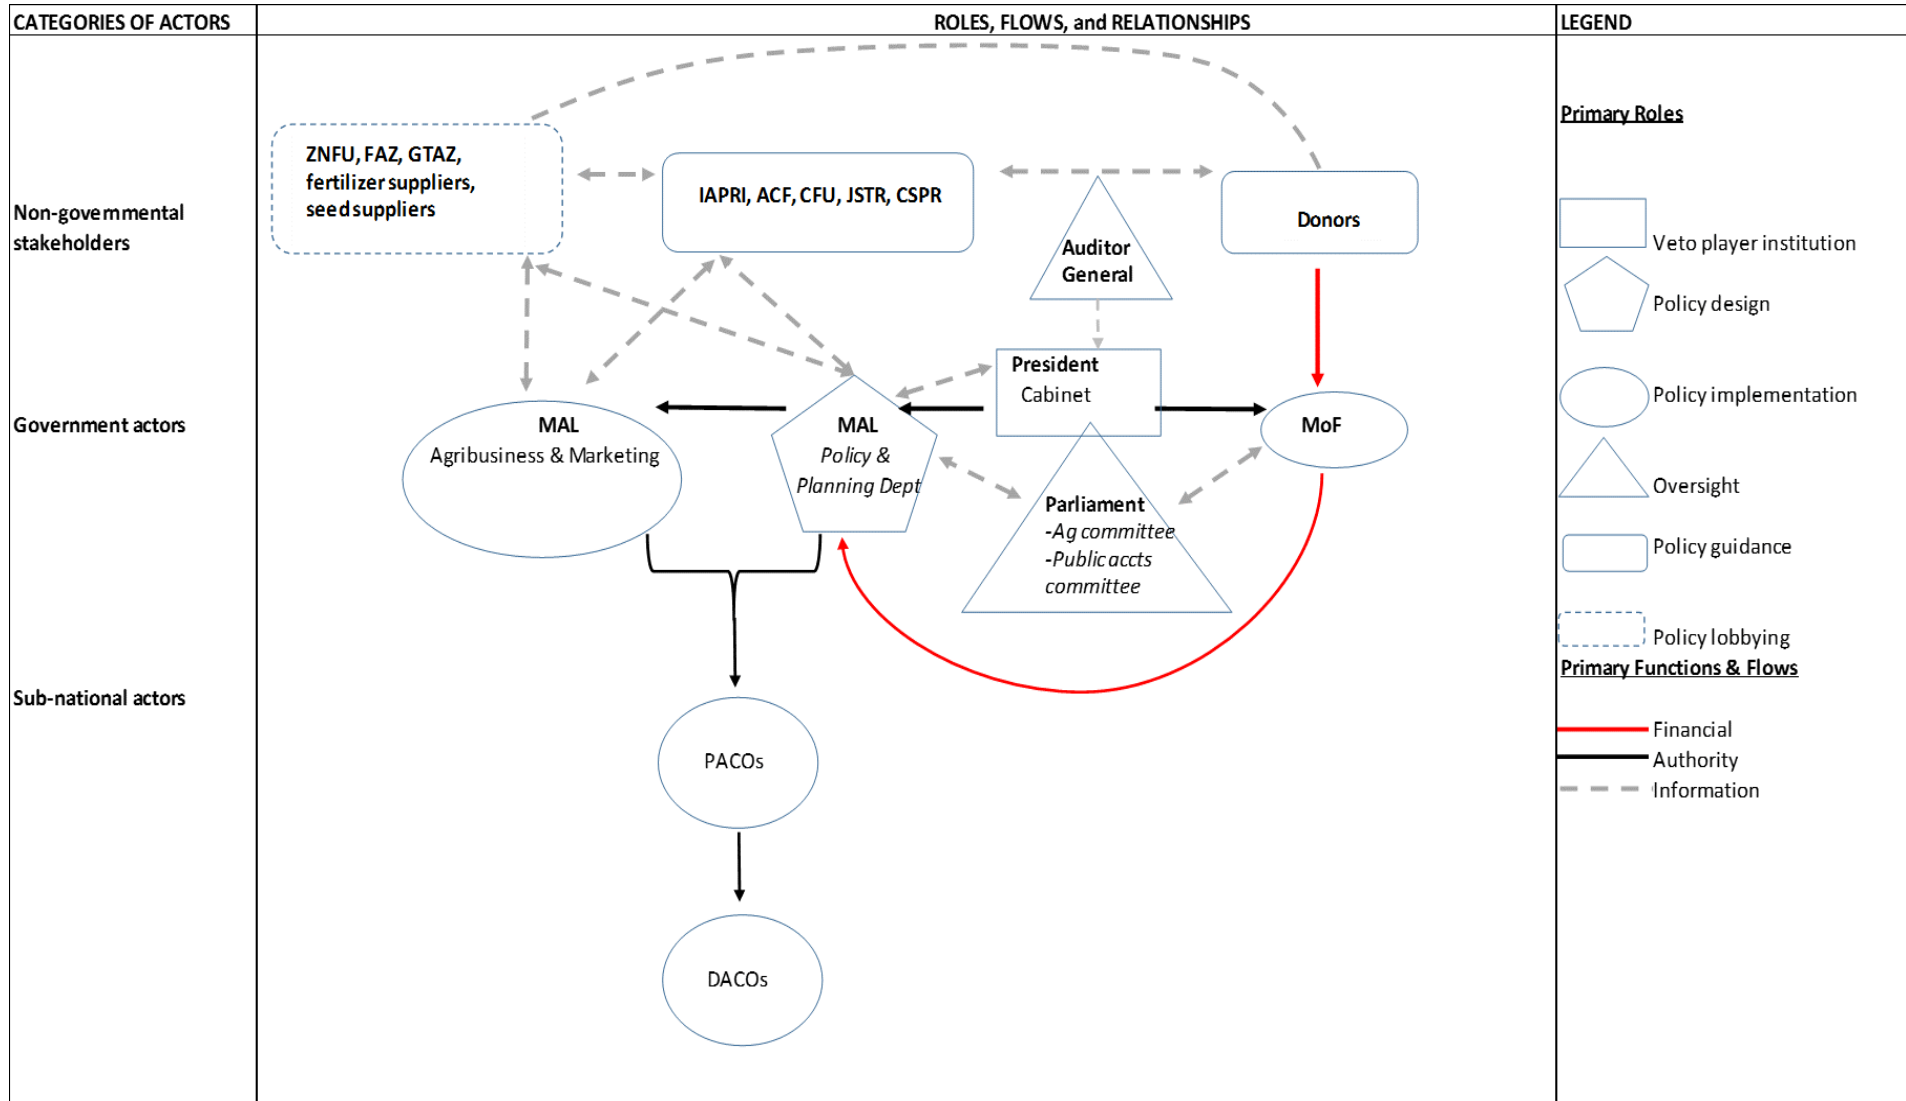

Political/Economic/Research Events

Policy-Related Events

Circle of influence graphics

Adoption of e-voucher for input subsidies in Zambia

Circle of Influence, Mid- 2013

Circle of Influence, Mid- 2015

Hypothesis testing tables

Policy stages	Determinants of policy change	Maize meal (1996), vetoed	Sugar (1998), implemented	Maize meal (2006), vetoed	Biofortification, maize
Agenda setting	Recognized, relevant problem	+	+	+	+
	Focusing event	+	+		+
	Powerful advocacy coalitions	+	+	+	+
Design	Knowledge & research	+	+	+	+
	Norms, biases, ideology, & beliefs	-	+	-	+
	Cost-benefit calculations	-	+	+	-
Adoption	Power proponents vs. opponents	-	+	-	-
	Government veto players		+	-	+
	Propitious timing				
Implementation	Requisite budget		-		+
	Institutional capacity		-		+
	Implementing stage veto players		+		+
	Commitment of policy champions		+		+
Evaluation & reform	Changing information & beliefs		-		+
	Changing material conditions		-		
	Institutional shifts				

Conclusions

- **Opportunities for controlled comparative analysis by identifying common drivers of change in different policy domains or different countries**
- **Integrates importance of interests, ideas, and institutions, and nature of the policy**
- **Identifies relative weight of research compared with many other factors and when evidence may have the most impact**
- **Provides a systematic inventory of considerations for future programming**
 - Potential for predictive explanation for why some policies are adopted but never implemented, and why some never even get on the agenda

Questions for Discussion

- How could the Kaleidoscope Model be useful for policymakers in Nepal?
- Are there any ongoing agricultural policy reforms that could be better understood or planned by using the Kaleidoscope Model?
- How does Nepal's devolved structure alter agricultural policy processes?
