## MHWS DATA COLLECTION

- Myanmar Household Welfare Survey (MHWS) – nationally, state/region, urban/rural representative household survey
- Round 1 (R1) - December 17<sup>th</sup>, 2021- February 13<sup>th</sup>, 2021
- Round 2 (R2) - April 7<sup>th</sup>, 2022 - June 24<sup>th</sup>, 2022
- Round 3 (R3) - July 8<sup>th</sup>, 2022- August 10<sup>th</sup>, 2022
- R1- 12,100 observations
- R2- 12,142 observations
- R3 -12,130 observations

# FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

## MHWS SURVEY

- Gauge impact of multiple types of shocks on various household & individual welfare measures:
  - Asset-poverty
  - Income poverty
  - Income shocks
  - Food security
  - Diet diversity (quality)
  - Livelihood shocks
  - Coping strategies

# FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

## MHWS SURVEY DESIGN

- The construction of a master databased in which all phone numbers are stratified at the township level.
- The number of phone numbers in each township was proportional to the population size of each township.
- Then households were selected randomly to be called in each township.
- To ensure that women, famers, less educated, and more remote individuals were not under sampled, minimum targets by state were set for women (half of all respondents), rural location, farming livelihood, and education level.

## SHORTCOMINGS OF PHONE SURVEYS

- Representativeness
  - Need working mobile phone
    - Better off
    - Less remote
    - More educated
- Enumerator trust
- Measurement error
- Shortened survey length

## MHWS DATA COLLECTION

Number of households interviewed, by township (R1 left Dec-Feb, R2 right April-June)

Kayin	0	17
Kayah	1	16
Tanintharyi	16	16
Tanintharyi	11	15

## WEIGHTING

### Basis Weights

- Apply an expansion factor: probability of occurring in the sample calculated from the 2019 ICS on the number of households in each urban/rural location of each state/region.
- Adjust for oversampling of farm households: Adjust number of farming households to be the same percentage of farm households as found in the Myanmar Living Conditions Survey MLCS (2017).
- Weight for education level of the respondent: Proportionally re-weight households based on the level of education of their respondent (i.e., to adjust for oversampling of more educated respondents).

## WEIGHTING

### Entropy Weights

- Maximum entropy approach (Wittenberg, 2010; Hainmueller, 2012)
- Used to generate or adjust weights to match averages and totals of pre-selected indicators
- Constraints to maintain the total number of households in each state/region and rural/urban location
- Constraints to maintain farming and lower educated households, state/region, rural/urban level
- Agricultural land owned (in five categories), based on the distribution of the 2017 MLCS data
- Housing type (apartment, bungalow/house, semi-pucca house, or other) among urban households, based on the reported 2020 ICS information
- Household composition - adjusts for households where all adults are women, rural/urban, based on the 2017 MLCS data
